**DETAILED ACTION**

***Continued Examination Under 37 CFR 1.114***

1. The RCE and preliminary amendments filed on 10/11/07 have been received and entered in the case.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 47-114 are rejected under 35 U.S.C. 103(a) as being unpatentable over any one of Hisatu, Altmann et al, Hotta, Andricos and Kornfeld et al in view of any one of Oldham, Metz, Henderson et al and Czarnocki.

See paragraphs three through six of the previous office action mailed on 2/26/07 for the details of the primary references. As to the new limitation that "an adjustable capacitance is connected to the output of each of the plurality of amplifier cells", such would have been obvious to persons having ordinary skill in the art because it is old and well-

known in the art to use adjustable capacitances connected to the output of amplifier cells for the well-known purposes of (1) providing the capability of varying the frequency response characteristics when the amplifier is used in a filter or tuner and (2) providing the benefit of eliminating undesirable effects of parasitic input capacitance (as explained by Henderson et al). Thus, the amended claims do not distinguish patentably over the above-noted combination of well-known prior art under 35 U.S.C. 103.

#### ***Other Prior Art***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Note USP 4,607,231 which shows another example of a variable capacitance connected to the output of an amplifier circuit.

#### ***Conclusion***
